

Request extension of draft Domtar facility (WI-0003620-07-0) NPDES permit

Stephen Jann to: Mugan, Tom J - DNR
Cc: George Azevedo, "Behm, Keri - DNR", Quintin White

03/30/2012 07:44 AM

Hi Tom. Including Quintin on the distribution list will meet our needs. Quintin can provide the information to others here. In terms of the permits we will want to review, R5 and WI have developed the list of major permits that R5 will review in FY 12. We also want to review any general permits. Further, we want to review any major permits that implement the adaptive management provision of NR 217. We may ask to look at other permits, including those with P provisions, when requested by outside parties. I think that it is in terms of the scope of potential reviews by R5.

Subject: RE: RE: Request extension of draft Domtar facility (WI-0003620-07-0) NPDES permit

What Keri does is send out an e-mail notice once a week to a list of individuals and organizations. That e-mail announces the permits that were public noticed in the last week and provides a link to DNR's public notice web site from where the documents can be downloaded. Individuals can click on the public notice itself (that is a relatively short document) that should have enough information to help the person decide if they want to review the permit in detail. If so, there is a link for the draft permit and also a link for other supporting documentation, including the Limits Calculation Document (for surface water permits).

Keri has added Quintin's name to the distribution list mentioned above. I hope this procedure meets your needs. It would be additional workload if Keri has to send a separate e-mail and attach the individual documents for each permit.

Tom

Hi Keri,

I work in the EPA Region 5 NPDES Programs Branch. EPA needs to review proposed WDNR-issued permits because we have not concluded the review and approval processes for NR 217. Please forward public notice draft major facility NPDES permits and fact sheets with proposed phosphorus effluent limits to our office. You can forward those to Quintin White, who is the State Program Manager for the States of Wisconsin, Michigan, and Illinois. Please find his mailing address below.

Thank you, George.

George,

As it turns out for this particular permit, the additional two-week delay will not affect how quickly we can reissue the Domtar permit. However, more generally, since we often issue permits at the end of calendar quarters, two weeks could have caused a major permit to be further backlogged into another quarter. I know both DNR and EPA would like to keep the backlog as low as possible, particularly for majors. Thank you for understanding.

All individual surface water permits are being evaluated for the need for phosphorus limitations. Some years ago, DNR was instructed to remove EPA from a list of persons/organizations we contact when we public notice permits. If EPA wishes to again be added to that list, please provide a contact name to Keri Behm. As an alternative, EPA may go to DNR's website to review permits that are currently on public notice.

Hi Mike,

I am writing to request a two week extension to review the draft Domtar facility (WI-0003620-07-0) NPDES permit. We were made aware of the draft permit this week. The public notice period ends today. In addition, please keep us informed of other draft permits with phosphorus limits that will be public noticed as EPA review for NR 217 has not concluded.

Thank you, George.
